Skills

Languages: PHP, Java , C# , C Language

Database: MySQL, Firebase, SQL Server

Web Development: PHP

Application Development: Flutter, Android

Projects

E-Card:

Designed a website, in which we had huge collection of different cards for different occasions. We as a team worked as a front-end developer and made that website in which we used filters to show the different cards accordingly.

Give-AID website:

This is a project which was assigned to us in our 2nd semester at Aptech. In this we used MVC using C# (ASP.net), and SQL as database. This website provides two different functionalities, one for Admin and other for the user. Admin is able to manage all other content of the website like editing partner, about us, help center, contact us, and donation links. And users are able to see and navigate the content of the website and also can register their account and choose the donation with concerned specified.

Online Shopping Cart:

We applied CRUD operations in this project using PHP and for database MySQL. This project consisted of an online grocery store in which there were two modules, one was admin and other was user. Admin can insert, update, and delete the items from the website and user can add to cart those available products.

Food Wastage Management:

In the 4th semester, I created an android application using JAVA, XML, and firebase. In this application event invitation is sent to the invitees, in which event details will be available. Once invitee accepts the invitation, it requires the user input to select his/her food preferences, which will be directly handled by Admin.

Education

Aptech (SFC)

ACCP-Prime Course

Feb 2020 – Feb 2023

Quaid e Azam Degree College

Intermediate

Jan 2018 – July 2020

The Citizen Foundation

Matriculation

2005 – 2017
